ABSTRACT

This annual report summarizes the condition of higher education in New Mexico based on January 1, 1998, data. Highlights from the overview section note the following: (1) More than 100,000 students were enrolled in New Mexico public colleges and universities, with fall 1997 enrollments virtually unchanged from fall 1996; (2) continuing a trend, the ethnic distribution of students shifted slightly toward fewer white/Anglo students and more Hispanic students; (3) women continued to increase their representation among degree recipients; (4) there has also been an increase in the number of degree recipients among students from historically under-represented ethnic groups, most notably among Hispanic bachelor's degree recipients; (5) however, overall degree completion rates remain below desired levels, especially for American Indian and black students; (6) tuition and fees account for considerably different percentages of total revenue across the 25 public institutions; (7) students received more than \$200 million in public financial aid, 87 percent from federal and 13 percent from state sources; and (8) concerning funding of postsecondary education, the report notes an average increase of 1 percent in instruction-and-general expenditures budgeted per student. Sections following the overview include extensive data tables. Also included is information on the New Mexico Commission on Higher Education. An appendix provides coding keys. (DB)

The Condition of Higher Education in New Mexico

Spring 1998

This report is based upon the most recent information available from New Mexico's public colleges and universities on January 1, 1998.

The report was assembled by the Commission on Higher Education, the postsecondary education coordinating board for the state.

Spring 1998

Honorable Gary Johnson, Governor, Honorable Members of the New Mexico Legislature, and Other Citizens of the State of New Mexico:

The Condition of Higher Education in New Mexico, Spring 1998, is the Commission on Higher Education's annual report of factual information about New Mexico's public colleges and universities and their student-customers. I am pleased to forward this report to you and hope that you will find it useful.

In this report you will find demographic information about the students attending our institutions, their completion of degree programs, the tuition and fees paid and financial aid received by students, and the revenues and institutional expenditures that undergird the diverse educational programs available to New Mexicans.

Although much of this information describes recent institutional activity, many of the measures can also be considered as indicators of each institution's performance. The Commission has identified institutional accountability as a key priority on which its energy will be focused this year, and beyond. We must evaluate the extent to which our institutions are working together as a system and are providing high quality education while using all resources efficiently. This accountability agenda will be reflected in additional performance measures in future annual reports. The Commission welcomes your suggestions for improving the annual report and looks forward to discussions with you regarding the accountability agenda.

The Commission is dedicated to promoting and coordinating a high quality system of postsecondary education that serves the needs of all students and advances the interests of our state.

Respectfully submitted,

Flaneld S. Taga
Ronald G. Toya

Chairman

Overview of the Status of Higher Education in New Mexico

Enrollment in New Mexico's institutions of higher education, like the state's population, continues a pattern of slow growth. Projections of the number of high school graduates in the state, recently released by the Western Interstate Commission for Higher Education and The College Board, suggest that this pattern will extend into the next decade, with annual increases of about one or two percent in the number of students completing high school. In addition to new high school graduates, however, the state's postsecondary institutions have welcomed increasing numbers of returning students who need additional education, a trend that is expected to continue. New welfare and workforce-development initiatives also can be expected to expand the number—and diversity— of students seeking postsecondary education during the next few years.

This annual report describes the recent history of higher education in New Mexico, but it also is intended to provide information useful in preparing for augmented roles that higher education must play if it is to serve the needs of our state in the coming years. The report begins with summary statements about students and their progress; tuition and financial aid; and public funding of higher education in New Mexico.

Student Enrollments

- ✓ More than 100,000 students are enrolled in New Mexico's public colleges and universities. Most of these students (97%) are studying on-campus, the remainder taking courses at distant sites. On-campus headcount enrollment during the Fall 1997 semester was virtually unchanged from Fall 1996.
- ✓ The balance of students between two-year and four-year campuses also did not change between 1996 and 1997. In both years, 53% of on-campus students were enrolled at two-year campuses, 47% at the state's universities. However, because students at two-year campuses are more often enrolled on a part-time basis or taking only one or two courses, 43% of the full-time-equivalent enrollment was at two-year campuses in Fall 1997, 57% at the universities (a gain of one percentage point at the two-year campuses since 1996). At least for the moment, the marked shift of enrollment from the universities to the two-year campuses observed over the past decade appears to have slowed or ceased. Although there was concern over underutilization of two-year campuses in New Mexico during the 1980s, New Mexico's balance of enrollments between two-year and four-year campuses is now very similar to nationwide figures.
- ✓ About 87% of the students enrolled at New Mexico's colleges and universities during Fall 1997 were state residents. This figure is essentially unchanged over the past several years. Relatively specialized institutions, such as New Mexico Military Institute and New Mexico Tech, attract greater proportions of out-of-state students (82% and 27%, respectively), as do campuses that are near our borders with other states.
- ✓ The average age of undergraduate students in Fall 1997 was 29 years, statewide. The average age at the universities was 25 years and that at two-year campuses was 31 years. Graduate students at New Mexico universities averaged 36 years of age. Students enrolled for off-campus (extended learning) courses also tended to be older than on-campus students, averaging 37 years of age. Postsecondary students clearly now represent a very broad spectrum of age.
- ✓ Women outnumber men enrolled at New Mexico's postsecondary institutions. In Fall 1997, 55% percent of the students enrolled at the universities were women and 60% of the students enrolled at the two-year campuses were women. Overall, 58% of the state's students were women, unchanged from Fall 1996.

✓ The ethnic distribution of students enrolled at New Mexico's public institutions shifted slightly toward fewer White/Anglo students and more Hispanic students, continuing a long-standing trend. In Fall 1997, 54% of the total on-campus enrollment, statewide, was White/Anglo, 35% was Hispanic, 7% was American Indian, 2% was Black, and 2% was Asian. (These percentages are based upon only those students classifying themselves among these five categories; other students are residents of other countries or did not indicate an ethnic identity.)

Completion of Degree Programs

- ✓ During the 1996-1997 academic year, New Mexico's public colleges and universities awarded 4,183 associate degrees or certificates, 5,564 bachelor's degrees, and 2,767 graduate degrees. Associate degrees were awarded in a wide range of fields, with the greatest numbers going to students studying liberal arts (often in preparation for transfer to a university) and in nursing. The predominant areas of study among bachelor's degree recipients were math, science, and engineering; social and behavioral sciences; and education. The largest numbers of graduate degrees were awarded in fields of education; math, science, and engineering; and business.
- ✓ Women continue to increase their representation among degree recipients. In 1996-1997, women earned 64% of the associate degrees awarded, 56% of the bachelor's degrees, 57% of the master's degrees, and 45% of the doctoral and professional degrees. Students from historically under-represented ethnic backgrounds have increased their numbers among degree recipients at all levels during the 1990s. This shift has been most notable among bachelor's degree recipients: in 1996-1997, 30% of New Mexico's bachelor's degree recipients classified themselves as Hispanic, nearly 4% as American Indian, 2% as Black, and 2% as Asian.
- ✓ Unfortunately, the likelihood of any student completing a bachelor's degree remains lower than is desirable and is particularly low among American Indian and Black students. When degree completion by students who first enrolled in the late 1980s is tracked over a ten-year period, only about half of the students who first enrolled at a research university are found to complete a degree. Fewer than a third of the students who first enrolled at a regional/comprehensive university complete a degree. Comparing older to more recent cohorts of students being tracked in these analyses failed to reveal any evidence of improvement in degree completion rates for the more recent cohorts.

Tuition and Fees

- ✓ On the average, resident undergraduate students enrolled in New Mexico's three research universities pay just over \$2,100 in tuition and fees per academic year. Resident undergraduate students at the three comprehensive universities pay an average of about \$1,600. Four of the six universities raised tuition for the 1997-1998 year, by an average of 4%.
- ✓ On the average, resident tuition and fees at New Mexico's public community colleges average about \$700 per academic year at branch campuses and \$540 at independent community colleges. Only six of the nineteen campuses raised tuition for 1997-1998.
- ✓ Tuition and fees account for considerably different percentages of total instructional revenue across the twenty-five public institutions. On the average, however, these levels are low in comparison to other states: New Mexico ranks about 46th among the states when tuition-and-fee levels are compared to percapita income of state residents.

Student Financial Assistance

✓ Students attending postsecondary institutions in New Mexico received more than \$200 million in public financial aid during the 1996-1997 academic year, counting scholarships, work-study jobs, and loans. About 87% of that assistance came from federal sources and 13% from state sources. Both sources of financial aid increased over 1995-1996: federal dollars increased about 8% and state aid increased about 11%. Loans, rather than scholarships, continue to account for a growing portion of the financial assistance awarded to students, leaving increased numbers of students with increased amounts of debt when they leave college.

Funding of Postsecondary Education

- ✓ The instructional programs of New Mexico's public postsecondary institutions continue to receive significant support from state funds. Across the six universities, 68% of instruction-and-general revenue budgeted for 1997-1998 is projected to come from state sources and 21% from tuition and fees. Across the nineteen two-year campuses, 61% is expected to come from state sources, 25% from local property tax levies, and 12% from tuition.
- ✓ Across all twenty-five campuses, the average instruction-and-general expenditure budgeted per full-time-equivalent student was \$7,056 for 1996-1997, an increase of 1% over the prior year. The average budgeted by universities was \$8,185; the average budgeted by two-year campuses was \$5,518.
- ✓ After several years with faculty salary increases averaging between 2% and 5% per year, a number of New Mexico's institutions were unable to award faculty salary increases for 1997-1998. University salaries remain 5% to 10% below those at peer institutions in other states. Faculty salaries at two-year campuses also average less than mountain-state comparisons.
- ✓ The New Mexico Legislature appropriated about \$9.3 million for capital outlay projects in 1997, about 54% of which went to universities and 46% to two-year campuses. Since 1992, a total of \$220 million has been appropriated, about 67% to universities and 33% to two-year campuses.

Further detail on each of these points can be found in the data tables that follow. Additional information can be obtained from the Commission office in Santa Fe.

Public Universities and Colleges in New Mexico

New Mexico has twenty-five publicly supported campuses, located throughout the state. Most citizens are within a one-hour commute of at least one campus and many can reach several campuses within that time. Several campuses are expanding their extended service capabilities, providing additional educational opportunity for citizens. The state's universities and independent community colleges are governed by boards whose members are either appointed by the Governor or elected locally. Branches and instructional centers are governed by the boards of their parent institutions assisted by local advisory boards.

Source: Fall 1997 Institution Registrar's Report. These figures are based upon third-Friday census date enrollments. Full-time-equivalent enrollment is calculated by dividing the total undergraduate credit hours taken by 15 and dividing the total graduate credit hours taken by 12, the minimum numbers of credit hours required for full-time enrollment at those two levels, respectively. In addition to its above figures, Albuquerque TVI enrolled 536 UNM students (160 FTE) who were taking remedial courses from ATVI.

Statewide Totals:	63,116	62,810	63,507	1.1%	.6%

Source: Fall Institution Registrar's Reports. These figures are based upon third-Friday census date on-campus enrollments and do not include off-campus enrollments or the UNM School of Medicine. Full-time-equivalent enrollment is calculated by dividing the total undergraduate credit hours taken by 15 and dividing the total graduate credit hours taken by 12, the minimum numbers of credit hours required for full-time status at those two levels, respectively.

Source: Institution Registrar's Report, Fall 1997. Cluster percentages may not total 100 because of rounding error. Ethnicity and sex are voluntarily self-reported by students, at enrollment. The "other" ethnic cluster includes non-resident alien students and students who chose not to identify their ethnicity; statewide, about 2% of students were non-resident alien and about 2% did not indicate an ethnicity. The distributions of ethnicity among off-campus (extended service) students is very similar to the above, however, 68% of off-campus (extended service) students are female.

Master's degrees include educational specialist awards. Doctoral degrees include awards in the professional fields of law and medicine. Totals include additional students who are non-resident aliens or who did not report an ethnic cluster. Associate degrees/certificates awarded in 1990-1991 and 1991-1992 do not include four campuses, Albuquerque TVI, Luna VTI, Mesa Technical, and New Mexico Military Institute. The number of associate degrees/certificates for 1995-1996 has been corrected since last year's report.

1994-1995	454	72.3	17.9	1.2	1.4 .	7.2	44.9
1995-1996	498	72.2	19.9	3.7	1.4	2.8	49.9

Percentages in ethnic clusters are based only upon the number of degrees awarded in those five clusters, not the total number of degrees awarded. (The remaining awards are to non-resident alien students and students who did not report an ethnic cluster.) Master's degrees include educational specialist awards. Doctoral degrees include awards in the professional fields of law and medicine. Associate degrees/certificates awarded in 1990-1991 and 1991-1992 do not include four campuses: Albuquerque TVI, Luna VTI, Mesa Technical, and New Mexico Military Institute. The percentages for associate degrees/certificates in 1995-1996 have been corrected since last year's report.

Cumulative Bachelor's Degree Completion Rates over a Ten-Year Period, for New Mexico Public Universities:

Source: Fall Institution Student Files and Annual Institution Degree Files. In this analysis, students who enter a university as first-time, full-time freshmen in the fall semesters 1985 through 1990 (six fall cohorts) are tracked statewide for ten years, to determine the number who complete a bachelor's degree at any of the six universities within the indicated number of years. Note that these figures are cumulative, that is, each percentage includes those students completing a bachelor's degree in that year and in all prior years. Because not all cohorts have had a ten-year window of time within which to complete a degree, the percentages for eight, nine, and ten years are based upon only those cohorts who have had those periods of time.

Source: Fall Institution Student Files and Annual Institution Degree Files. These degree completion rates are for a ten-year period from a student's original enrollment as a freshman. The rates are for the 1985 through 1987 entering fall classes of full-time freshmen, the cohorts that could be tracked for the full ten-year period. Students were tracked to determine the number that completed a bachelor's degree at the institution of original enrollment or at another New Mexico university. Entries marked with an asterisk should be interpreted with particular caution because they are based upon entering freshman classes that average fewer than ten students per year in these ethnic clusters.

Source: Institutional Financial Aid Summary Reports for 1996-97. Because some students receive support through more than one program, these numbers are duplicated counts of students benefitting from state financial assistance. This table includes New Mexico state dollars awarded to students enrolled at eligible institutions within New Mexico and in other states. In addition to New Mexico's public institutions, some programs apply to students at the College of Santa Fe, the College of the Southwest, the Institute of American Indian Arts, Dine (Navajo Community) College, Southwest Indian Polytechnic Institute, and St. John's College. Students participating in the Minority Doctoral Loan-for-Service Program, Medical Student Loan-for-Service Program, and Osteopathic Medical Student Loan-for-Service Program may attend institutions in other states.

1997-98 Revenues in Instruction and General Budgets

The *instructional* programs of New Mexico's universities and colleges are funded from the following sources, in the indicated proportions. In 1997-1998, state appropriations were projected to account for 68% of the instruction-and-general revenues of the universities and 61% of those for two-year campuses, virtually the same as in the prior year.

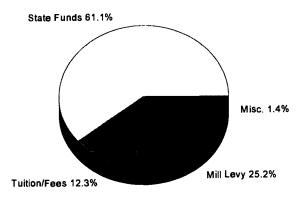

Public Four-Year Institutions

Total \$377.6 Million

Public Two-Year Institutions

Total \$167.8 Million

Sources of Revenue for Instruction

Postsecondary institutions rely upon a number of sources of revenue for their operations. As the following tables reveal, New Mexico's colleges and universities continue to rely upon state appropriations for about two-thirds of their operating funds for instructional programs. Universities generate most of their remaining revenue from tuition, research contracts, investments, and stateland-and-permanent-fund income. Two-year institutions generate most of their additional revenue from local property tax levies and tuition. (Two of the two-year campuses in New Mexico—Northern New Mexico Community College and New Mexico Military Institute— do not have local property tax levies.)

Source: Commission on Higher Education's annual study. Peer comparison groups of institutions in other states were adopted by the Commission in 1990. The comparison groups generally consist of sixteen institutions, no more than four of which are located outside a specific geographic region centered on New Mexico. The key factors in selecting peer institutions included similarity in mission, size, and range of instructional programs. Salary data for these comparison institutions are obtained annually from the journal Academe in its Annual Report on the Economic Status of the Profession.

This table does not include reauthorizations. The 1992 data include institution shares of a statewide appropriation to the Commission on Higher Education for instructional equipment. The 1993 data include institution shares of a statewide appropriation for libraries. The 1994 data exclude the following: a statewide general obligation bond issue for Americans with Disabilities Act projects, equipment renewal and replacement, \$700,000 appropriated to the UNM-Taos learning center, and \$1 million appropriated for Navajo Community (Dine) College. The 1997 data exclude allocations from a \$48,257,000 general obligation bond issue to be presented to the voters in November 1998 (continuing a pattern in this table of listing general obligation bond appropriations in the year that they are approved by the voters).

The Commission on Higher Education

The Condition of Higher Education in New Mexico: Spring 1998

The New Mexico Commission on Higher Education is a statutory coordinating board whose fifteen members are appointed by the Governor and confirmed by the Legislature to be broadly representative of the citizens of New Mexico. The Commission brings a statewide perspective in recommending and establishing policy direction and in providing leadership in higher education within New Mexico. Established to foster and guide a system of higher education that best meets the needs of the citizens of the state within the resources available, the Commission recognizes that the institutions have authority to determine their own respective missions as set forth in the various constitutional and statutory provisions through which they have been established.

The Mission of the Commission on Higher Education

The mission of the New Mexico Commission on Higher Education is to:

- Provide leadership in developing a shared vision of the system of higher education most appropriate for responding to the needs of New Mexico's citizens in the present and in the future;
- Foster access to high quality postsecondary education for all citizens, regardless of income level, ethnic background, place of residence, or disability;
- Identify and promote adequate and equitable funding for all of New Mexico's public postsecondary institutions, while encouraging the efficient use of all available resources; and
- Promote and coordinate a high quality system of postsecondary education that is responsive to changing needs.

The Commission's constituencies include the Legislature, the Governor, the educational institutions, students (both current and future), and other citizens of New Mexico. The Commission seeks to provide independent, objective, and timely analyses and recommendations to its constituencies, and utilizes a consultative approach in developing its research agenda, gathering information, and developing its recommendations.

Recent Publications of the Commission on Higher Education

During the past year, the Commission and its staff issued a number of reports on various topics and continued a process of revising regulations or rewriting them into a new format specified by the New Mexico Administrative Code. Any of the items on the following list can be obtained from the Commission office in Santa Fe.

August 1997 WICHE Professional Student Exchange Regulation: 5 NMAC 7.22

Regulation for Approval of New Graduate Programs: 5 NMAC 5.2

October 1997 Base Instruction and General Formula Calculations for 1998-1999

November 1997 Institutional Funding Recommendations for FY 1998-99
